1 [Timing Driven Placement Reconfiguration for Fault Tolerance and Yield Enhancement in FPGAs](#)

Anmol Mathur, C. L. Liu

March 1996 **Proceedings of the 1996 European conference on Design and Test**Full text available: [pdf\(561.24 KB\)](#)Additional Information: [full citation](#), [abstract](#), [citations](#)[Publisher Site](#)

A Field Programmable Gate Array (FPGA) consists of an array of identical configurable logic blocks (CLBs), each capable of implementing any boolean function with a bounded number of inputs. Such architectural regularity provides an inherent redundancy which can be exploited for fault tolerance and yield enhancement. In this paper we examine the problem of reconfiguring the placement of a circuit on an FPGA to tolerate a given fault pattern in the array of CLBs. The primary objective of the place ...
